OUTRIGGER PADS. ESSENTIAL SAFETY.

Access equipment, specifically **spider lifts**, have become an integral part of the Australian market, with owners benefiting from increased **safety, efficiency** and **productivity** through the use of these machines.

The key accessory behind these benefits, as well as operator safety, equipment longevity and performance lies within the use of **Outrigger Pads**.

What are they and what do they do?

The pads are used to expand and disperse the point of contact pressure (PSI/PSF) from the equipment's outrigger/pontoon/shoe/float, across the ground surface. This weight dispersion ensures stability to the outriggers, allowing equipment to be used on uneven ground.

SAFE SUPPORT. UNBREAKABLE STABILITY.

Over 50% of crane and spider lift failure involves a collapse from improper use of the outriggers.

If you're considering using outrigger pads (and you should!), it is important to use the best quality. LODAX Pads will ensure the lowest risk to both the equipment and the operator. Built to withstand the toughest conditions, they're backed by a lifetime manufacturer's warranty.

Correct/Incorrect Positioning

- Eco-friendly (plastic recycling technology) ✓
- Light weight ✓
- Easy to handle ✓
- High durability & flexibility ✓
- Water-repellent ✓
- Unbreakable ✓
- Won't Corrode. Won't Rot. ✓
